

501- AWD**MOST IMP QUESTION BANK**

- =====
- What are the key differences between SQL and NoSQL databases?
 - Describe the data types available in MongoDB.
 - How do you create a new database in MongoDB?
 - What is the purpose of projection in MongoDB queries?
 - Explain the concept of components in React.
 - How do you pass data to components in React using props?
 - What are CRUD operations? Provide examples of each in MongoDB.
 - What are React hooks, and why are they advantageous?
 - How can you perform an update operation in MongoDB?
 - Describe the significance of `event.target.name` in form handling in React.
 - What are the advantages of using NoSQL databases?
 - How do you create and drop collections in MongoDB?
 - Explain how conditional rendering can be achieved in React.
 - What is the role of `$routeProvider` in AngularJS?
 - What is the MVC architecture in AngularJS?
 - Describe how to use `ng-model` in AngularJS forms.
 - What are the benefits of using the `useState` hook in React?
 - How do you handle events in React?
 - What are some common filters in AngularJS, and how are they applied?
 - Explain the purpose of directives in AngularJS.
 - What is the process of creating and handling forms in React?
 - Describe the differences between class components and functional components in React.
 - How do you limit and sort results in a MongoDB query?
 - What is the use of the `useEffect` hook in React?
 - How do you navigate between pages in an AngularJS single-page application?
 - What are the main characteristics of AngularJS?
 - Explain how to embed AngularJS scripts into HTML.
 - Describe how to create a custom hook in React.
 - What is the purpose of `ng-click` in AngularJS?
 - How can data validation be implemented in AngularJS forms?
 - What are aggregation commands in MongoDB, and how are they used?
 - Describe how to create a module in AngularJS.
 - What are React Memo and its benefits?
 - How do you implement event handling in AngularJS?
 - Explain how to manage lists in React.
 - What is the role of the `useContext` hook in React?
 - Describe the purpose of `ng-show` and `ng-hide` in AngularJS.
 - How do you create a new collection in MongoDB?
 - What are the implications of using `useReducer` in React?
 - Explain how to use `ng-repeat` in AngularJS.
 - What is the importance of React's virtual DOM?

- How can you perform a delete operation in MongoDB?
- Describe the significance of the `useRef` hook in React.
- How does AngularJS handle two-way data binding?
- Explain the concept of nested components in React.
- What is the difference between `ng-init` and `ng-controller` in AngularJS?
- Describe the advantages of using functional components with hooks in React.
- What are the challenges of using NoSQL databases?
- Explain the concept of a single-page application (SPA) in AngularJS.
- How do you use aggregation pipelines in MongoDB?
