

QUESTION BANK

ADVANCE WEB DESIGNING

Long Questions

Unit-1

1. Explain MongoDB Data types.
2. Explain CRUD Operation.
3. Advantages of MongoDB.
4. Explain in MongoDB.
5. How to Add, Update, and Delete operation Perform in MongoDB.
6. Advantages and Disadvantages of NoSQL.
7. Explain Features of MongoDB.
8. Differences between SQL and NoSQL
9. MongoDB Query and Projection Operator.
10. Aggregation Using aggregate() Method
11. How does the MongoDB aggregation pipeline work?
12. Explain Document and collection with example.
13. What is MongoDB? What are Advantages of MongoDB? Explain Document and collection with example.
14. Explain various insert operation of MongoDB.
15. Explain various delete operation of MongoDB.
16. Explain various update operation of MongoDB.
17. MongoDB data types with its syntax and example.
18. Write a command/query for the following MongoDB operations:
 - 1) Create Database "movie"
 - 2) apply capped to only "film"
 - 3) Create Collection named "film"
 - 4) Create Collection named "actor"
 - 5) Insert at least 10 documents in the collection film and in collection actor
 - 6) Delete the film "XYZ"
 - 7) Delete an actor named "ABC"
 - 8) Update the actor's address where actor id is "101"
 - 9) Delete all actors from an "actor" collection who have age greater than "50"
 - 10) show last 5 record of Collections named "actor"
 - 11) Replace particular actor from particular "film"
 - 12) Convert "actor" to capped.

Unit-2

1. Explain React JS Components.
2. How to pass data through props?
3. Explain Concept of React Js.
4. Explain Conditional Statements and Operators in React Js.
5. Explain React Event. How do you create it? Explain event with an example.
6. Explain Props with example.
7. Write a code for React.JS which display "Hello World".

Unit-3

1. Explain briefly how to add, handle and submit the React.js Form.
2. Explain Hooks with advantages.
3. Explain useState, useContext, useReducer hooks with Example.
4. Explain useRef, useReducer, useCallback, useMemo hooks with Example.
5. Explain form handling method in React.js with an example.
6. How to build custom hooks? Advantages and use.
7. What is Event handler? Explain event.target.name and event.target.value.
8. Describe Textarea and Dropdown list components of form with an example.
9. What is hook? List and explain different built-in hooks.
10. How does the custom hook differ from built in hook?
11. Create a form in React.js with Language Selection label, Dropdown List Which contains different Languages, and submit button Components.
12. Create a simple counter using React.js which increments or decrements count dynamically On-screen as the user clicks on buttons. Use following steps
 1. Prepare two HTML buttons, one for increment value another for decrement value.
 2. If we click on increment button then value will be increased by 1.. such 1,2,3,4.... And If we click on decrement button then value will be decrease by 1.. such 4,3,2,1.... And So on...

Unit-4

1. List and describe feature of AngularJS.
2. What is Expression in AngularJS? Explain various expressions with an example.
3. Describe MVC architecture in detail.
4. List and describe various directives of AngularJS.
5. What do you mean by Filter? Explain uppercase lowercase, currency and order by filters.
6. Write about characteristics of AngularJS.
7. Explain Filters in AngularJS.
8. What are services in AngularJS? Explain with an example.
9. Explain AngularJS controller.
10. How to define a controller in AngularJS?
11. Explain AngularJS Dependency Injection.
12. Advantages and Disadvantages of AngularJS.

13. Write angular JS code for take Roll No, Name, Address from user in form and display those data in table format.

Unit-5

1. What is single page application(SPA)?
2. What is \$Routes Provider Services?
3. What is HTML DOM Directives?
4. Explain Form and Form validation in AngularJS with Example.
5. Explain AngularJS form validation.
6. How to create module in AngularJS?
7. How to embed AngularJS in HTML?
8. Explain AngularJS module.
9. Explain Routing Capability of AngularJS.
10. What do you mean by ng-Route?
11. Advantages and Disadvantages Single Page Application
12. Single-Page Application Vs Multi-Page Application.
13. Write angular JS code that describes the basic of Single Page Application in AngularJS.
14. Write angular JS code which accepts and validates "Name" and "Mobile No" from user.
